

Rohit Verma

Bengaluru, India | rohitatiit@gmail.com | +91 99888 44215 linkedin.com/in/rohit-verma-24084718 | github.com/rverma-dev

Director-level platform engineering leader for multi-tenant cloud, observability, AI infrastructure, and governed agentic products. Built and operated 0->1 systems at scale, including \$240M/month payments infrastructure, approximately \$6M annualized observability cost reduction, and enterprise SaaS platforms on Salesforce Hyperforce. Led engineering organizations up to 40 engineers and a 30-person DevOps/SRE group, while owning architecture, execution quality, and cross-team technical direction.

EXPERIENCE

Principal Engineer (PMTS), MuleSoft (Salesforce)

Bengaluru, India; remote US org | Feb 2025 - Present

Founding engineer for multi-tenant observability, agent federation, and agentic developer systems on Salesforce Hyperforce. Director-role positioning: platform strategy, cross-team architecture, reliability economics, and governed AI execution systems.

Anypoint Monitoring Alerts - Hyperforce re-platform + intelligent alerting

- Led architecture for a revenue-critical observability migration of 3M alerts from legacy InfluxDB to Amazon Managed Prometheus; delivered approximately 80% cost-to-serve reduction, approximately \$6M annualized, with zero customer-visible SLO regression.
- Designed multi-tenant alert evaluation for 50K-100K concurrent evaluations at P99 < 1s across at least 2 regions with blue-green deploys.
- Scaled platform operations to 60+ AMP workspaces and 45K alerts per workspace across enterprise tenants.
- Drove AU, UK, and GIA2H Hyperforce rollout work across app and infrastructure repositories, including new-FI onboarding automation, LaunchDarkly Relay Proxy support, and GIA-mode deployment wiring.
- Established execution-quality mechanisms: TEST_SCENARIOS manifests, APIM local firing harnesses, Bruno coverage, and a coherence-validator agent to keep RFCs, tests, and implementation aligned.
- Authored a 15-RFC architecture series across adjacent teams; designed PromQL-native anomaly detection with z-score and robust bands, 26h smoothing, persistence gates, and explainable dynamic thresholds.

Proactive Diagnostics / MuleSoft Pulse - AM Agent Federation

- Authored HLDs and ADRs for AM agent federation: MCP-first tool facades, A2A delegation, xAPI model gateway integration, LangGraph workflow contracts, memory/RAG boundaries, and workload isolation.
- Designed a governed diagnostic evidence plane that turns alert events into cited AI diagnoses over DIAF, app logs, metrics, traces, and KB/RAG without exposing raw archives, full logs, heap dumps, or tenant content to prompts.
- Converted passive alerting into proactive-diagnosis architecture for 160K alerts/week, with alert-storm dedup, per-tenant budgets, 5% runtime-overhead cap, source references, degradation flags, and audit/cost controls.

Internal IDE, Unleash

- Built an internal IDE for agent-assisted engineering across repo, ticket, PR, terminal, browser, automation, and agent context in one local-first workspace.
- Architected a four-plane multi-agent decision system: Knowledge, Decision Graph, Tiered Memory, and Governance, with 11 typed agents, A2A AgentCards, run ledger, path-tiered write authority, compliance hooks, repair detection, and outcomes review.
- Built Unleash, a local-first AI engineering IDE from a Superset fork with isolated git worktrees, terminal/chat/file/diff/browser/PR/GUS context, autonomous and coordinator workspaces, automations, and A2UI reports.

Vice President / GSL - PaaS, Brane Enterprise

Bengaluru, India | Jan 2021 - Jul 2023

- Architected and delivered the full enterprise SaaS platform: control plane, tenancy, metering, telemetry, billing, and on-prem distribution for a MuleSoft-class integration platform.
- Built the infrastructure, platform, and security stack with a 2-engineer core, achieving enterprise-scale deployment and compliance readiness.
- Led a 30-person DevOps + SRE organization across CI/CD, observability, IaC, cost, incident response, and security.
- Delivered sidecar event-billing at 10M events/min with per-tenant rate limiting; tuned workflow engine to 10M TPS across Kafka, DynamoDB, TiDB, and Redis.
- Shipped NSL SaaS Accelerator with just-in-time IaC reused across Entity Store, Tag Manager, Event Manager, and Schedulers.
- Delivered full on-prem distribution on Nutanix, ScyllaDB, Kafka, TiDB, and ClickHouse; built entity data pipeline on ClickHouse, Redis, Kafka Connect, Glue, and S3.

Principal Architect, Jupiter Money

Bengaluru, India | Nov 2019 - Jan 2021

- Single technical owner for ISO 27001, SOC 2, PCI-DSS, NPCI, UPI SAR compliance and partner-bank audits; all passed.
- Designed hub-and-spoke partner-bank architecture securing card and UPI transactions at \$240M/month.
- Built in-house SIEM processing 200 GB/hour on OpenSearch with anomaly detection on banking logs.
- Built multi-tenant cloud-data platform on AWS, EMR, Airflow, Flink, and Kubernetes.

Principal Architect, Niki.ai

Bengaluru, India | Dec 2017 - Nov 2019

- Led 3 EMs and 40 engineers; delivered Payment SDK handling 1.2M transactions/day for B2B partners.
- Built Dynamo-streams-based order fulfillment on CQRS and event sourcing.
- Replaced manual promotion engine with self-serve Kie rules engine; delivered PCI-DSS multi-account cloud infrastructure.

Selected Earlier Experience

- Independent Consultant: redesigned a platform from 20K to 100K QPS; rebuilt RBAC/ABAC checks from 25 s to < 5 ms at 100K QPS; introduced tenant-context sidecar architecture and FinOps practices.
- Atlassian: led Jira data-migration integration frameworks for external sources across cross-functional teams; shipped Confluence image ALT-text generation using LAVIS/InstructBLIP.
- Sprinklr: shipped Integration Marketplace V1 with Consul-based discovery and Pubsubhubbub lifecycle management; led V1 customer trial with SAP C4C.
- Rokitt: built personalized travel platform with 200+ endpoints and data pipelines on Spark, Spark ML, Redis, and Databricks.

EDUCATION

B.Tech (Hons), Indian Institute of Technology Kharagpur | Jul 2007 - May 2011

SKILLS

- Leadership: org design, manager mentorship, RFC culture, executive communication, cross-team architecture, incident response, delivery quality.
- AI & Agent Systems: multi-agent orchestration, MCP/A2A contracts, LangGraph, Spring AI, governance substrates, RAG, vector search, LLM evaluation.
- Platform & Infra: AWS, Kubernetes/EKS, Istio, Cilium, Spinnaker, Argo Rollouts, GitHub Actions, Terraform/CDK, Nutanix.
- Data & Streaming: Kafka, Flink, ClickHouse, TiDB, ScyllaDB, Cassandra, Redis, Hudi, DynamoDB, Druid, Amazon Managed Prometheus.
- Observability & Security: OpenTelemetry, Grafana, Prometheus/PromQL, K6, OpenSearch, SIEM, anomaly detection, PCI-DSS, SOC 2, ISO 27001, IAM.
- Languages: Go, Python, TypeScript, Java.
